

Continuing our relationship with a major hotel group we have undertaken two hotel conversions from out dated systems to new WRAS approved systems.

In Scotland we planned the installation in stages to work around the hotels existing commitments. Our engineers installed and commissioned new cold water services and improved the existing hot water setup.

In Plymouth, an emergency conversion was required due to an inspector finding unsafe drinking water in the hotel. We were able to quickly and efficiently plan and attended site, removing existing tanks and connect up to a new booster set in time for the re-inspection of the hotel.

WRAS approved Booster set.
